2.2. 7135-818 Fuel Pump IMV Valve Storage Standards

(1) Choose a Suitable Storage Place

The warehouse and cargo yard where the fuel pump IMV valves are stored should be kept clean and dry, and away from the factory buildings that generate harmful gases and dust; do not mix with acid, alkali, salt and other substances; the storage place should have a good drainage system; the cargo yard should be flattened with gravel or furnace ash etc. to enhance the water permeability of the surface layer to keep the reservoir area dry.

(2) Strict Storage Requirements

Strict inspections should be carried out when the fuel pump IMV valves are put into storage, the surface cleaning work should be done well to remove water traces, oil stains, ash and other dirt, remove the rust and do anti-rust treatment in time. Packaged fuel pump IMV valves must be protected from damage.

(3) Keep The Warehouse Dry And Do Moisture-proof Work

The relative humidity is usually below 70% for the fuel pump IMV valves placed in the room, and the corrosion of the fuel pump IMV valves is significantly reduced.

Fuel pump IMV valves must be stored in the warehouse, and they are forbidden to store in the same warehouse with commodities with high water content.

(4) Reasonable Stacking

After the fuel pump IMV valve is exposed to rain, the corrosion rate will increase significantly. The purpose of sealing is to isolate the fuel pump IMV valve from rainwater and humid air, so the warehouse window should be checked in time to avoid rainwater entering the warehouse.

If the fuel pump IMV valve package is damaged, it should be repaired or replaced; when the package is damp, the packaging material should be dried; if the original anti-corrosion and oil applied at the factory is found to be damaged or dried up, it should be cleaned and re-applied oil in time.

⚠ It is forbidden to leave the fuel pump IMV valve exposed in the air for a long time.

⚠ It is forbidden to store acid, alkali, salt and other substances together with the fuel pump IMV valve.
